

Environmental Impact & RFR Compliance Statement

FM translator W239AX will be located at an existing communications site that is in compliance with all requirements of Section 1.1307 of the Commission's rules.

The modification of W239AX proposes to operate with .019 kW ERP, circular, non-directional, with a COR AGL of 61.0 meters. There are no other broadcast facilities at the site.

For a worst case estimation, at 2 meters AGL at the base of the tower the RFR is .04% of the occupational/controlled MPE limit, and .2% of the general population/uncontrolled MPE limit.

RFR hazard warning signs will be posted at the site. The Applicant certifies that in cooperation with other users of the site, all authorized personnel will be protected from RFR exposure in excess of FCC guidelines while accessing any controlled exposure area, including the tower, by either reducing power or ceasing operations, and information pertaining to the contact representative of the facility will be posted.
