

**Compliance with Special Operating Conditions**

The Construction Permit contains several Special Operating Conditions, summarized as follows:

1. The permittee must provide the results of a complete proof-of-performance to establish the horizontal plane radiation patterns for both the horizontally and vertically polarized radiation components.
  2. The permittee must provide an affidavit from a licensed surveyor to establish that the directional antenna has been oriented at the proper azimuth.
  3. The permittee must submit an affidavit that a qualified engineer oversaw the installation of the directional antenna system.
  4. The permittee must provide a statement that the relative field strength of neither the measured horizontally nor vertically polarized radiation component exceeds, at any azimuth, the value indicated on the composite radiation pattern authorized by the construction permit.
  5. The permittee/licensee, in coordination with other site users, must reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.
- Conditions one through four have been met, and are documented in Exhibit 9A and 9B.
  - EMF agrees to fully cooperate with other site users to reduce power or cease operation as necessary to protect persons having access to the site, tower, or antenna from radiofrequency electromagnetic fields in excess of FCC guidelines.

Therefore, all Special Operating Conditions of the KLHV-FM Construction Permit (FCC File Number BPED-19961112ME) have been met.
