

Pursuant to the FCC's Public Notice, *Digital Channel Election Issues – Compliance with July 1, 2006 Replication/Maximization Interference Protection Deadline*, released June 14, 2006 (DA 06-1255), the instant application hereby requests authorization for KAKW-DT to modify its outstanding digital construction permit to specify the digital station's current Special Temporary Authority ("STA") parameters.

The station's digital facility has been operating pursuant to STA since December 2002, and is merely seeking a permanent authorization for its already operating digital STA facility as instructed by the June 14, 2006 Public Notice. As demonstrated in the station's license renewal application filed on March 31, 2006, the station's analog and digital facility, including its digital STA facility, comply with OET-65 standards. *See* FCC File No. BRCT-20060331BPK. The station's transmitter site has restricted access and all work done at the tower is coordinated through the site owner and station. KAKW-DT has and will continue to cooperate with the other tenants to ensure climber safety by reducing or ceasing transmissions when workers need to be in, near or passing through the KAKW-DT antenna aperture.
