Mr. Morgan Grammer,

Please let this letter represent the results of a ground survey provided by our company to establish a directional line of 233 degrees off true north for the new antenna's installed on the existing tower near Standard City, Illinois.

On November 13, 2003, I established ground points for the proposed antenna's direction using our GPS Surveying equipment. Our field crew went back to the site on December 2, 2003, and verified the direction of the newly installed antenna's on the existing tower. The sketch below represents the results of the above mentioned ground survey.

Sincerely,

Carl J. Nail
