RE: WVOZ-FM
Via FAX: 787-878-1861

Dear Gentlemen:

By this means, on behalf of **International Broadcasting Corporation**, licensee of FM Broadcast Station **WVOZ-FM**, Carolina, Puerto Rico, and pursuant to the provisions in §73.1030 of the *Rules & Regulations of the Federal Communications Commission (FCC)*, please be notified that minor changes to the existing operation of **WVOZ-FM** shall be filed with the FCC proposing to move the transmitting system of the Station from its current location at El Yunque site, to a proposed site located in Aguas Buenas, 31.8 kilometers West (263°T) from the present site (Geographical Coordinates: 18° 16' 23.8" NL; 66° 05' 33.4" WL, NAD 83) . As a result of the changes proposed, the height of the Antenna Center of Radiation shall decrease to be 490 meters AMSL, the operating Effective Power will be increased to be 50 kW in order to compensate for the loss due to decreased height above average terrain at the new site, the operating frequency shall remain to be 107.7 MHz (FM Ch.299), the transmitting antenna will remain to be non-directional circularly polarized, and coverage contours will be adjusted in accordance to these new parameters and shall be calculated to meet all technical requirements specified in applicable sections of the referred FCC Rules.

Your evaluation of the changes proposed for any adverse technical impact that these changes may be predicted to cause in the Arecibo Observatory will be appreciated. Please forward your comments, questions and/or endorsement to the attention of the undersigned at your earliest convenience.

Cordially,

Alberto Pereira, PE
