

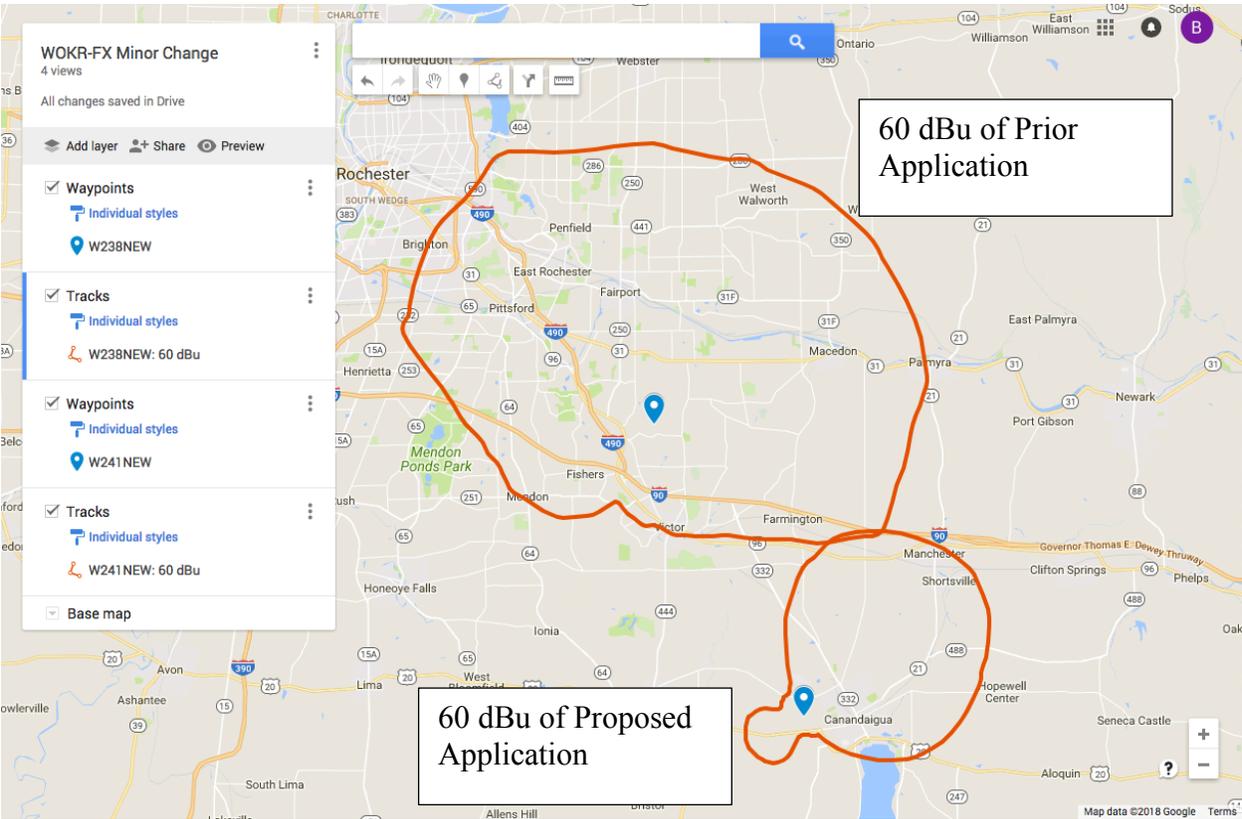

Exhibit 1

Amendment to BNPFT-20180129ABG
Change Operating Parameters
Auction 100– MX Group 46
Facility ID No. 202662

This application is a minor modification to application BNPFT-20180129ABG as part of a resolution to MX Group 46. In accordance to FCC DA 18-332, this modification is classified as a minor change. CFR 74.1233(a) states that a minor change is classified as one within 3 three channels or to an intermediate frequency channel and any change where the antenna location would not continue to provide a 1mV/m (60 dBu) service to some portion of its previously authorized 1mV/m (60 dBu) service area.

The original output channel of the application in MX Group 46 was specified to be 96.1 MHz (channel 241). This application amends the frequency to 95.5 MHz (channel 238), three channels below the original frequency.

Applicant is requesting a new location for the transmitting antenna. At this location with the operating parameters specified, the 1 mV/m contours have an area of shared coverage due to their overlap. This is depicted in the map below. This exhibit demonstrates that conditions of CFR 74.1233(a) are met with this amendment.

This amendment updates the following sections of the original application:

III-A: Tech Box.

VI: Certification
