MEMO

To: Processing Engineer  
Media Bureau  
Federal Communications Commission

From: Ed O'Donnell,  
Vice President of Engineering  
WIBW (AM) MCC Radio, LLC.

RE: WIBW-AM Partial proof of performance  
KQTP (FM) CP BPH-20020722AAC

Please be advised that the licensee of WIBW is aware that a CP has been issued to KQTP (FM) St. Mary's, KS at a location (according to FCC data) within three kilometers of the WIBW directional array. We were previously contacted by the KQTP engineering staff concerning the conditions listed on the CP. Since the KQTP antenna is to be mounted on an existing antenna structure, and the antenna is located entirely inside the OD of the tower, we feel there is no need to perform a partial proof.

Furthermore, the WIBW engineering staff has closely watched the DA operating parameters before, during and after the KQTP antenna supporting structure installation. They have noticed no influence on the WIBW DA parameters.

Therefore, we waive any obligations of the KQTP licensee to perform a partial proof of the WIBW DA antenna system.
