Re: Tower for Binghamton W254BH

Dear FCC,

I have observed the tower used to mount the Scala CA2 antenna for translator W254BH. It is not base insulated or detuned at the AM frequency of WINR(AM), specifically 680khz. The tower is of self supporting design, and is grounded at the base.

I certify that the above information is correct.

Sincerely,

James L. Travis  
Chief Engineer  
Family Life Network  
Bath, NY
