RF Radiation Hazard Measurements for the common transmitter site of WSLC-FM, 94.9 MHz, 100 kW , WSLQ-FM, 99.1 MHz, 200 kW and WXLK-FM, 92.3 MHz, 100 kW located on Poor Mountain in Roanoke County Virginia.

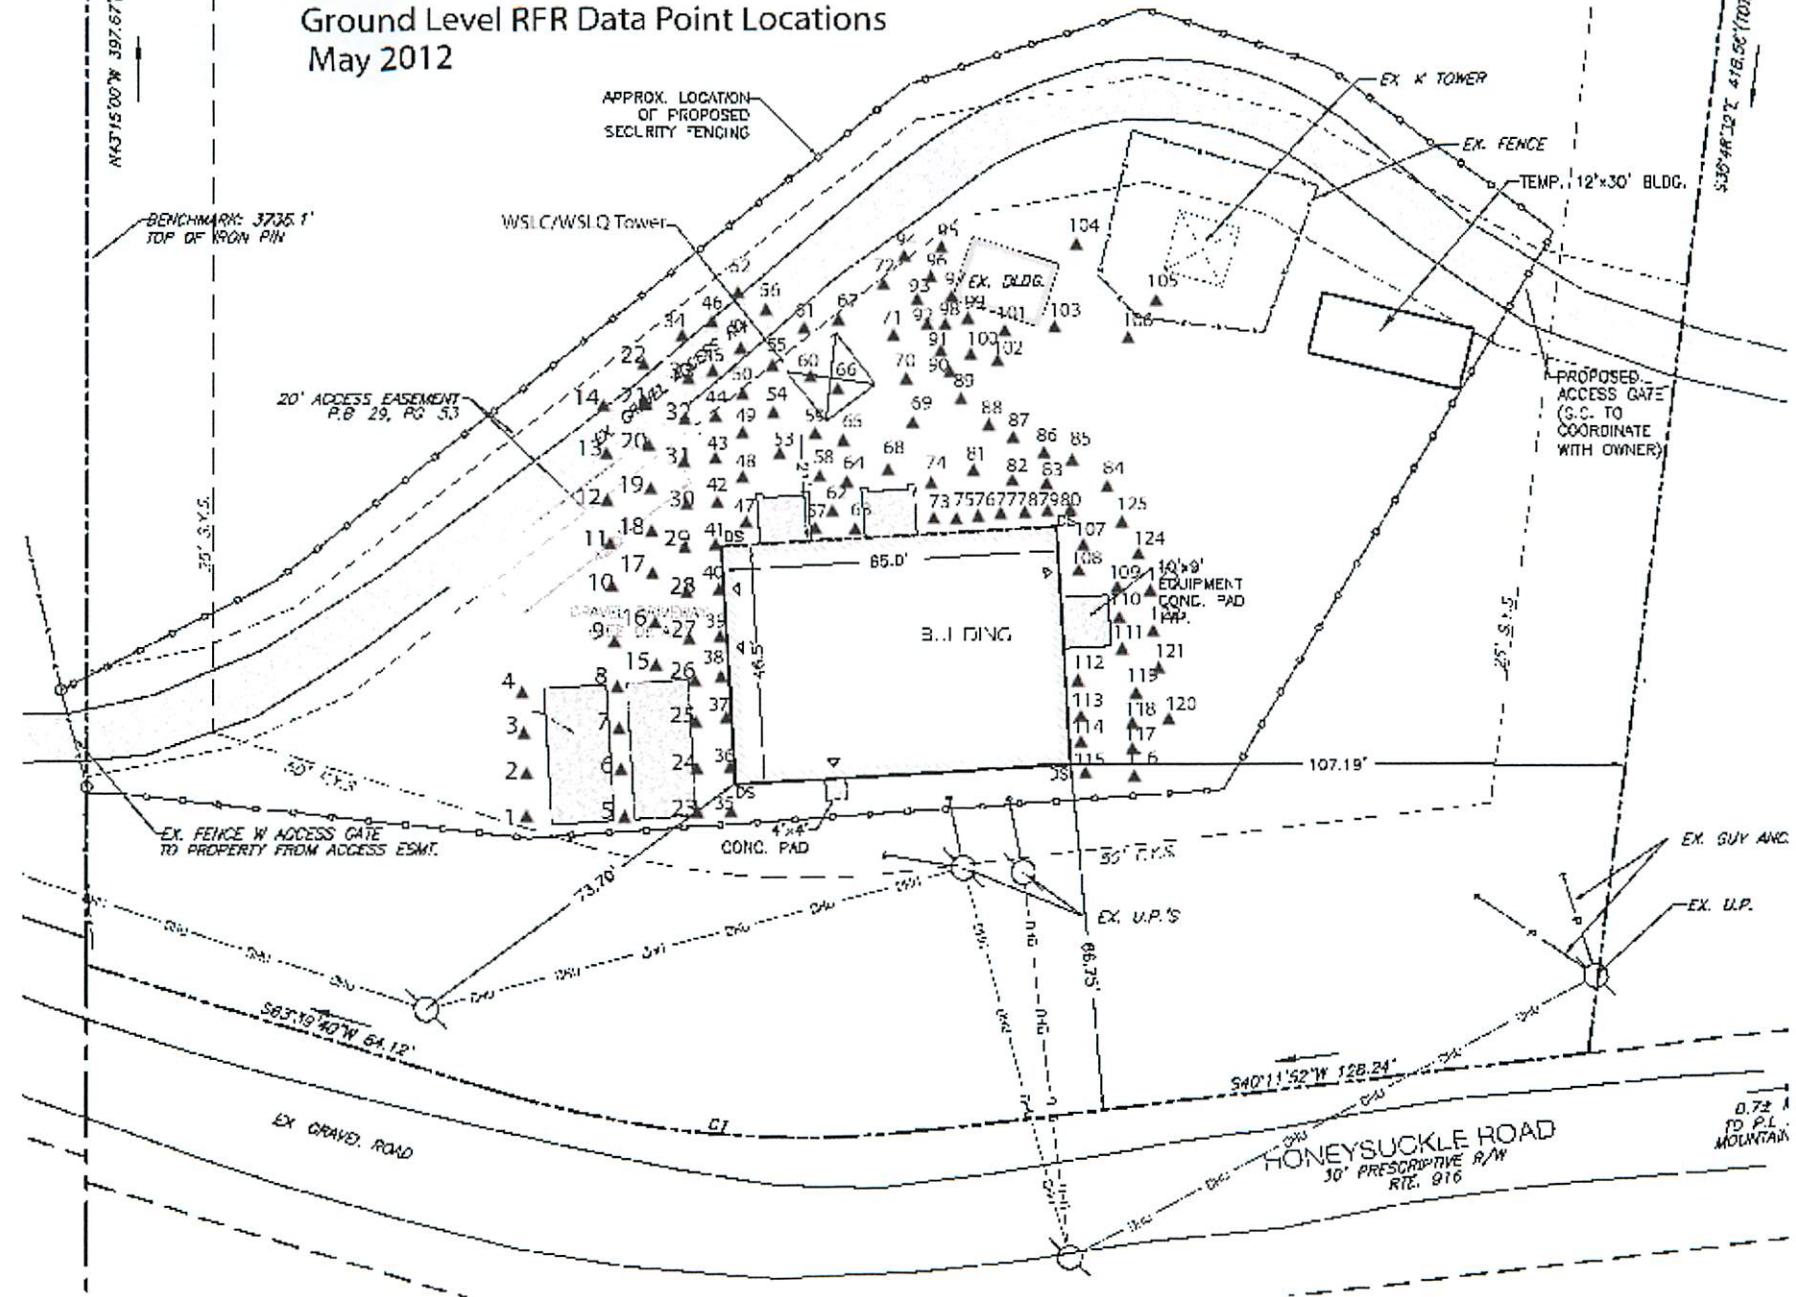

Areas in and around the transmitter site were surveyed on May 16, 2012 with a Narda NBM-550 Broadband Field Meter equipped with a NAR-EA-5091 probe to determine possible RF Radiation hazards. Both un-controlled and controlled areas were measured in accordance with OET Bulletin 65.

All RFR levels in un-controlled, publicly accessible areas were found to be less than 20% of the limit for general public exposure (200 uW/cm^2) as defined in Bulletin OET-65. Controlled areas were found to be less than 52% of the limit for occupational exposure (1000 uW/cm^2) as defined in Bulletin OET-65.
