

EXHIBIT 12

Page #1, Waiver Request of Section 74.1204

Lebanon, TN New-T 10 Watts ERP

Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent Station WNRQ, Nashville, TN

WNRQ

The proposed site is contained entirely inside the service contour of second-adjacent Station WNRQ, Channel 290, Class C, 98 kW, Nashville, TN. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent station WNRQ least arriving protected F(50,50) signal at the proposed transmitter site is 75-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to WNRQ is 115-dBu (free-space contour method employed). This means that the 115-dBu interfering signal would, in the worst case at the maximum radial, extend 40 meters from the Center of Radiation, which is proposed at 53 meters AGL. This interfering contour doesn't touch the ground, but a 7.5 Min Topo map is being supplied to show no buildings around the tower tall enough to enter the interference zone. Since no population inhabits this 115-dBu interfering areas, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel station WNRQ.
