

EXHIBIT 12

Prepared by Guy Smith in connection with application
Flash Cut for K44LD, Ch. 44, Plainview, TX

ENVIRONMENTAL CONSIDERATIONS

The proposed construction will not have a significant environmental impact. The only change proposed is the conversion of the existing 1kW NTSC transmitter to a 500W digital transmitter.

Calculations of RF Radiation levels have been performed in accordance with OST Bulletin No. 65, Edition 97.1, dated August 1997. The total contribution from the proposed new station, at any accessible point in the vicinity of the tower, other than on the tower, is below 1% of the permissible exposure level for the general public. This proposed facility is therefore categorically excluded from consideration under section 1.1306.

Policies are in place at Ramar Communications II, Ltd. to reduce power and / or shut down transmitters as necessary in order to avoid exposure of workers on the tower to RF levels in excess of ANSI guidelines.
