

Exhibit 12
FCC Form 349

Specific Interference Analysis

This application complies with interference protection under 47 C.F.R. § 74.1204 as documented below.

This application proposes a move from the construction permit site to the site initially proposed in BNPFT20030317LVP.

A site change proposed in the instant application is in compliance with the requirements of Public Notice DA-03-2095, FM Translator Auction No. 83 Non-Mutually Exclusive Applications dated June 30, 2003, Footnote 8. The change is a minor modification as demonstrated in Figure 1. The change creates no new mutual exclusivities as shown in the allocation table in this exhibit.

As tabulated below, this proposal is fully spaced under §74.1204(a) with respect to all facilities, permits and applications.

Figure 1 includes an allocations study for the only facility where the lack of overlap of contours is less than 10 kilometers, WRCQ, Dunn, North Carolina, shown both with licensed facilities and class maximum facilities. Height Above Average Terrain is calculated at one degree horizontal increments. The distance to the relevant contours is calculated and then plotted at the same increments.

Terrain data is extracted from the V-Soft Communications NED 03 terrain database. The NED 03 database is derived from the USGS National Elevation Data 30 meter terrain database. The USGS National Elevation Dataset has been developed by merging the highest-resolution, best-quality elevation data available across the United States into a seamless raster

format. NED is the result of the maturation of the USGS effort to provide 1:24,000-scale Digital Elevation Model (DEM) data for the conterminous US and 1:63,360-scale DEM data for Alaska.
