W231AD Facility ID No. 11670

July 6, 2005

The construction permit for this facility, BPFT-20020507AAM, contains as special condition (3), requirements with regard to standard band radio WKAV.

The requirement states in part "Prior to construction of the tower authorized herein..." No tower has been constructed to support W231AD. The antenna of W231AD is located upon the pre-existing "folded unipole" non-directional antenna employed by WKAV. This structure is further described in antenna structure registration number 1020761.

The W231AD antenna has not made a material increase in the effective radius of the radiator of WKAV. By mounting at the described position no material change in base impedance or in radiated pattern of WKAV is known to have occurred.

Due to the foregoing, special condition or restriction 3 is thought to have been complied with.

Respectfully Submitted
