Terrain database is FCC NGDC 30 Sec , R= 73.215 qualifying spacings or FCC minimum Spacings in KM, M= Margin in KM
In & Out distances between contours are shown at closest points. Reference zone= East Zone, Co to 3rd adjacent.

All separation margins (if shown) include rounding.
Ant Column: (D= DA Standard, Z= DA 73.215, N= Not DA 73.215, _= Omni), Polarization (C, H, V, E), Beamtilt(Y, N, X)
"*" affixed to 'IN' or 'OUT' values = site inside restricted contour.

Reference station has protected zone issue: AM tower

/1 This is the subject facility of this instant application.

/2 Please see following pages for waiver request.

Protected zones report for W223CP.P on channel 256D 05-18-2017

Lat. 44 08 18.7 Lng. 88 32 40.3, ERP= 0.25 kw, HAAT= 71.04 m

Facility is okay with respect to Canada. Distance = 405.4 km.

Closest AM Facility is WHBY, KIMBERLY, WI, L, DA2 at 287.7° at a distance of 0.1 km

Facility is okay with respect to FCC monitoring stations.

Closest FCC Monitoring Station is 270.3 km= Allegan, MI

Facility is okay toward West Virginia Quiet Zone. Distance to center = 992.1 km

Facility is okay toward Table Mountain. Distance to Center = 1450.1 km, Azimuth = 257.8 Degrees True

Waiver For Compliance with 47 C.F.R. 74.1204

Interference to WPKR

The site for the facility of proposed CP amendment is located within the protected contour of third-adjacent channel station WPKR, channel 258C2, in Omro, WI, the Protected Station. The predicted contour at the proposed site for this amendment is 65.8 dBu F[50,50]. According to established contour protection ratios, the contour from the interfering station should be 40 dB higher than the protected contour. Therefore the respective potential interfering contour for this proposed amendment is 105.8 dBu F[50,10] (the “Affected Area”).

Figure 1

The antenna is proposed to be located with radiation center 54 meters AGL transmitting 0.250 KW ERP. Applicant proposes to use a PSI antenna model PSIFML-6A-75WAVE, which is a six-bay antenna with $\frac{3}{4}$ wavelength vertical bay spacing.

The 105.8 dBu contour is displayed in **Figure 1** with the maximum radiation contour (major lobe) of 570 meters displayed in orange. A graphical representation of radiation in the vertical plane along with tabular data is displayed on the last two pages of this exhibit. The depression angle in the table is highlighted for the lowest elevation and distance from the tower for the major lobe and each of the four minor lobes.

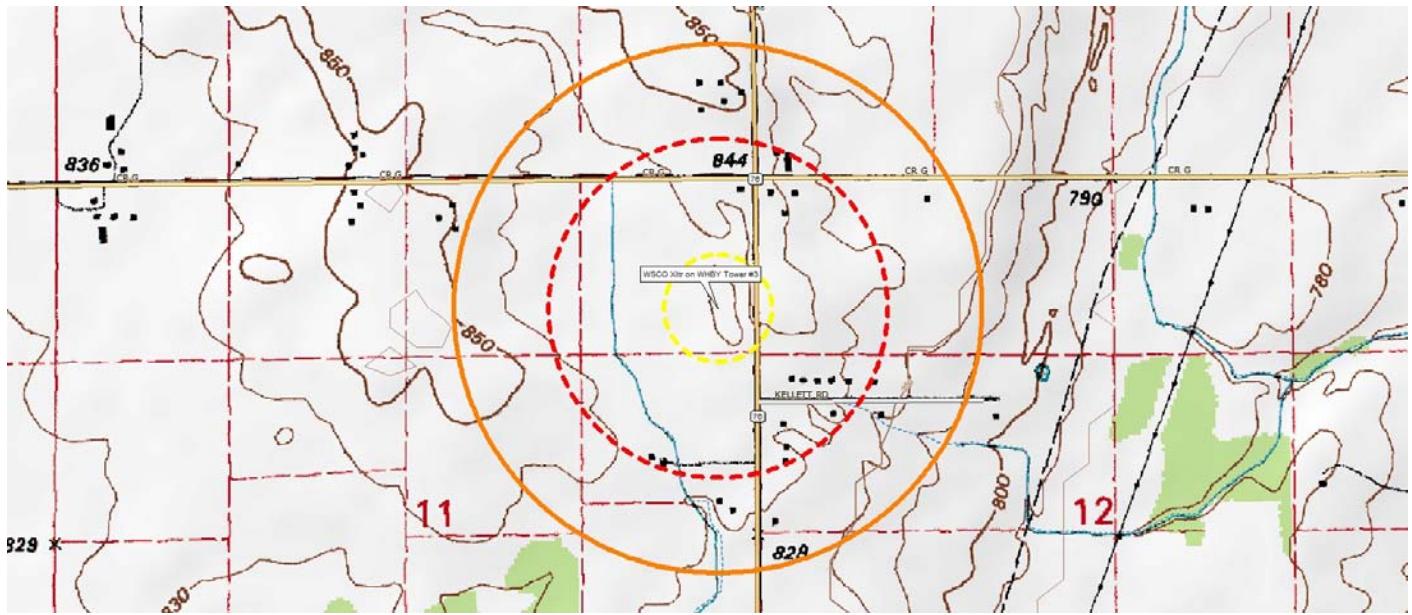

Figure 2

Minor lobe #4 (indicated by a black radius in [Figure 1](#)) at the 73 degree depression angle is less than nine meters from the tower and hovers above 25 meters AGL within a 9 meter radius of the tower. The lowest elevation of minor lobe #3 (indicated by a green radius in [Figure 1](#)) is at the 52 degree deflection angle and is limited to 6 meters above site elevation within a 39 meter radius of the tower. The lowest elevation of minor lobe #2 (indicated by a blue radius in [Figure 1](#)) is at the 34 degree deflection angle and is limited to 8.6 meters above site elevation within a 67 meter radius of the tower. There are no structures nor public areas within the radii of minor lobe #4 (black), of minor lobe #3 (green) and minor lobe #2 (blue).

The lowest elevation of minor lobe #1 (indicated by a yellow radius in [Figure 1](#)) is at the 19 degree deflection angle and is limited to 11.9 meters above site elevation within a 122 meter radius of the tower. The only structure within or near that radius is the WHBY transmitter building, which is barely outside of minor lobe #1 and is not open to the public. The only public area within minor lobe #1 (yellow) is State Highway 76. The topographic map in [Figure 2](#) displays the affected portion of State Highway 76 to be approximately even with the tower reference elevation. Therefore minor lobe #1 radiation hovering more than 11 meters AGL at State Highway 76 is above all public areas.

The portion of the major lobe that is of concern is located between the yellow and orange radii in [Figure 1](#). The highest public location within that area is a two-story house with dormers (8 meters AGL) on the west side of State Highway 76 (see label in [Figure 1](#) and picture in [Figure 3](#)) on ground 3.3 meters above site elevation at a distance of 493 meters from the tower (see violet line in [Figure 1](#)). At that distance, the interference hovers more than 20 meters above site elevation and more than 8 meters above that house.

Figure 3

The only areas having even higher ground are located near the western edge of the orange radius. However, those are farm fields with no public locations.

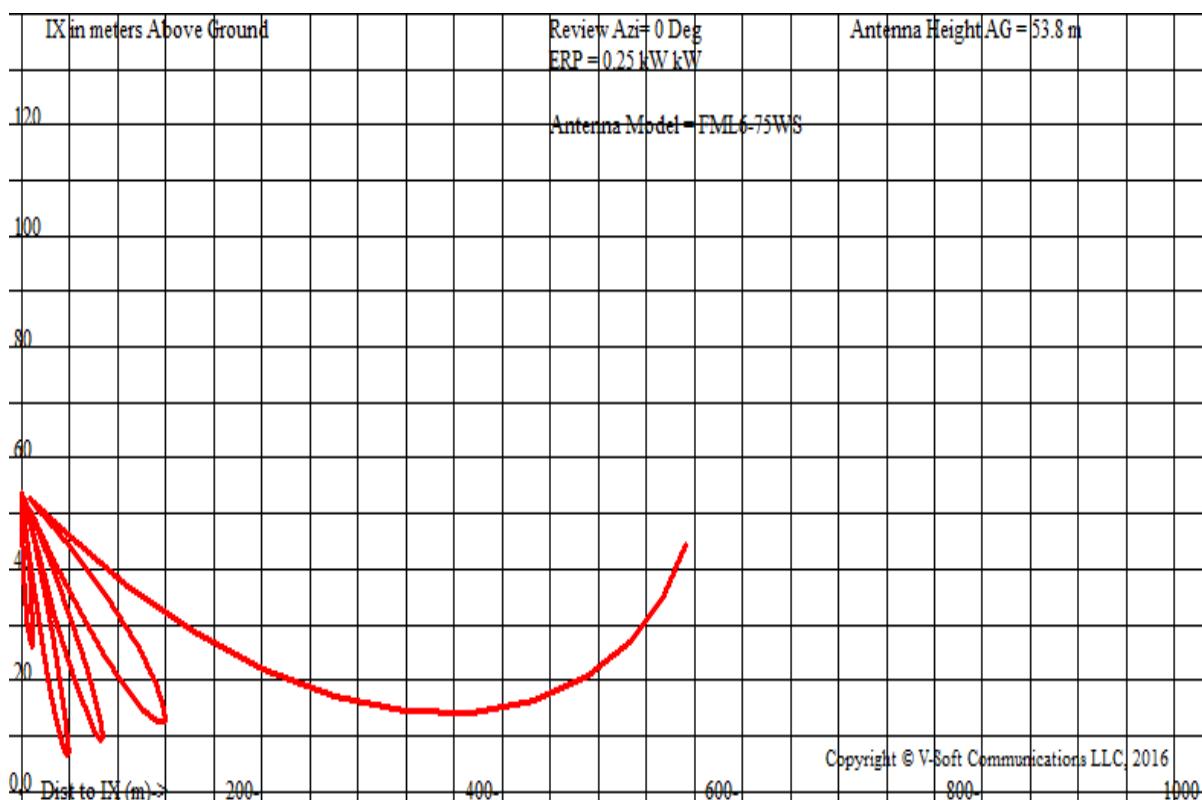

All other locations are at elevations ranging between approximately 3 meters above the site elevation to much lower than the site elevation with most public locations being even with or below site elevation. The lowest elevation of the radiation (red) is at the 6 degree deflection angle and is higher than 13 meters above site elevation at the 383 meter radius of the tower. There are no elevated roadways, no structures inhabitable by the public exceeding 8 meters AGL and no other public areas within those locations exceeding 8 meters AGL. Therefore, the interference hovers 5 meters or more above all such public areas.

Request for Waiver

No buildings, roads or other structures that the public would normally occupy would put the public within the interference pattern radiated by the antenna.

Since this proposal complies with 47 C.F.R. 74.1204(d) based upon the fact that no actual interference will occur due to no population and no public locations within the areas of interference, we hereby request waiver of 47 C.F.R. 74.1204(a)(3) for separation between this proposed facility and the Protected Station.

Please see the Vertical Radiation Chart and Table on the following pages.
