

TECHNICAL EXHIBIT  
APPLICATION FOR MODIFICATION OF  
DIGITAL CONSTRUCTION PERMIT  
CLASS A STATION KDCG-CA  
FACILITY ID 349  
OPELOUSAS, LOUISIANA  
CH 22 15 KW (MAX-DA)

Technical Narrative

The technical exhibit of which this narrative is part was prepared in support of an application for modification of construction permit (BMPDTA-20080804ABF) for Class A station KDCG-CA at Opelousas, Louisiana (Facility ID: 349).

Specifically, this application proposes to modify the KDCG-CA authorized digital operation by changing its directional antenna. Class A station KDCG-CA proposes to employ its Scala SL-8 analog antenna and operate with a maximum directional ERP of 15 kilowatts and an RCAMSL of 81.3 meters. No other changes are proposed.

Figure 1 depicts the KDCG-CA licensed 74 dBu analog contour and the authorized and proposed 51 dBu contours for KDCG-CA. As shown, the proposed 51 dBu contours completely encompasses the licensed 74 dBu contour.

Antenna Structure Registration

The FCC Tower Registration Number for the existing 67 meter (220 foot) tower is 1212281.

Response to Paragraph 11 (Waiver of Section 73.6018)

A study has been conducted to assure that the proposal will not create prohibited interference with other licensed, authorized or pending analog or digital TV, LPTV/translator and Class A TV stations. Using the procedures outlined in the FCC's OET-69 Bulletin, a 1 kilometer cell size resolution, a distance terrain increment of 0.2 kilometer and 1990 U.S. Census, the proposal complies with the current FCC interference requirements (i.e., less than 0.5% new interference caused to other pertinent assignments), except with respect to the pre-transition DTV allotment of station KLPB-DT on channel 23 at Lafayette, Louisiana. DTV station KLPB-DT is licensed (BLEDT-20031117ACC) from a site located 30.3 kilometers from its DTV allotment site.

The proposed KDCG-CA digital operation protects the KLPB-DT licensed facility both on a pre-transition and post-transition basis. However, the facility causes prohibited interference to KLPB-DT's pre-transition allotment, and therefore a waiver of Section 73.6018 is requested.

Since KLPB-DT's currently licensed digital facility is protected based on a pre-transition (Figure 2) and post-transition interference study (Figure 3), it is believed there is no basis to protect KLPB-DT's old pre-transition allotment for the remaining seven weeks leading up to the transition. It is KDCG-CA's intent to maximize coverage and be ready to broadcast digitally on June 12, 2009. However, in order to do this while protecting KLPB-DT's pre-transition allotment, KDCG-CA would have to either purchase a new antenna, or operate at a reduced ERP of 1.7 kilowatts using the current SL-8 antenna. Class A station KDCG-CA would like to be operating with maximized digital facilities when the rest of the full power stations make the DTV switch, and thus a waiver is respectively requested.

In addition, the proposed facility complies with all the following applicable rule Sections: Sections 73.6016, 73.6017, 73.6019, 73.6020, 73.6027, and 74.794(b).

#### Environmental Considerations

The KDCG-CA facilities were evaluated in terms of potential radiofrequency radiation exposure at 2 meters above ground level in accordance with OST Bulletin No. 65, "Evaluating Compliance With FCC-Specified Guidelines for Human Exposure to Radiofrequency Radiation". This Bulletin provides assistance in determining whether FCC-regulated transmitting facilities, operations or devices comply with limits for human exposure to radiofrequency (RF) electromagnetic fields adopted by the Commission in 1996.<sup>1</sup>

The calculated power density at 2 meters above ground level at the base of the tower was calculated using the appropriate equation contained in the Bulletin. As shown on

---

<sup>1</sup> See Report and Order in ET Docket 93-62, FCC 96-326, adopted August 1, 1996, 11 FCC Rcd 15123 (1997). See also First Memorandum Opinion and Order, ET Docket 93-62, FCC 96-487, adopted December 23, 1996, 11 FCC Rcd 17512 (1997), and Second Memorandum Opinion and Order and Notice of Proposed Rulemaking, ET Docket 93-62, FCC 97-303, adopted August 25, 1997.

Figure 4 (antenna vertical relative pattern), the maximum vertical relative field for depression angles towards the tower base (-60° to -90°) is less than 0.25. Therefore, using a vertical relative field value of 0.25, a maximum ERP of 15 kilowatts, and an antenna center of radiation height above ground level of 63 meters, the calculated power density at two meters above ground level at the base of the tower is 0.0084 milliwatt per square centimeter ( $\text{mW}/\text{cm}^2$ ), or 2.42 percent of the Commission's recommended limit applicable to general population/uncontrolled exposure areas ( $0.35 \text{ mW}/\text{cm}^2$  for TV channel 22). Therefore, the facility complies with the FCC's RF emission rules.

Access to the transmitting site will be restricted and appropriately marked with warning signs. Furthermore, a protocol will be in effect in the event that workers or other authorized personnel enter the restricted area appropriate measures shall be taken to limit RF energy exposure. Such measures include limiting the exposure time, wearing protective clothing, reducing power to an acceptable level or termination of transmitter output power all together until workers leave the restricted area.

It is noted that this statement only addresses the potential for radiofrequency electromagnetic field exposure. All other aspects of the environmental processing analysis will be or already have been addressed by the tower owner as part of the tower registration process.

If there are questions concerning the technical portion of this application, please contact the office of the undersigned.

Potential Interfering Stations Included in above Scenario 2

After Analysis

Results for: 23A LA LAFAYETTE                   DTVPLN                   DTVP0526                   PLN  
 HAAT 369.0 m, ATV ERP 64.3 kW

	POPULATION	AREA (sq km)
within Noise Limited Contour	536692	18294.4
not affected by terrain losses	536692	18294.4
lost to NTSC IX	0	0.0
lost to additional IX by ATV	25581	462.8
lost to ATV IX only	25581	462.8
lost to all IX	25581	462.8

Figure 2

## KDCG-CA Pre-Transition OET-69 Interference Analysis

Potential Interfering Stations Included in above Scenario 2

22A LA OPELOUSAS                   USERRECORD01                   APP

The following station failed the de minimis interference criteria.

22D LA OPELOUSAS                   USERRECORD01

ERP 15.00 kW HAAT 67.0 m RCAMSL 81.0 m

Antenna CDB 0000000023503

Due to interference to the following station and scenario: 2

23D LA LAFAYETTE                   DTVPLN                   DTVP0526

ERP 64.30 kW HAAT 369.0 m RCAMSL 371.0 m

Antenna rep LALAFAYETTE\_23

Percent Service lost without proposal: 0.0 to DTVPLN DTVP0526

Percent Service lost with proposal: 4.8 to DTVPLN DTVP0526

Worst case new IX 4.7663% Scenario 1
