

Exhibit 10 - Foothills Public Radio, Inc.

Population and Area Coverage and First and Second Service Study

The 60 dBu service contours of all non-commercial educational aural services that overlap the service contour of the proposed new NCE FM are depicted Figure 2 below.

The area to which the proposed new NCE FM facility provides 60 dBu service is 6,760 persons within 66.8 sq km.

The proposed new facility service contour is enclosed entirely within the service contour of WXCI at Danbury, CT. Thus it will provide no first service.

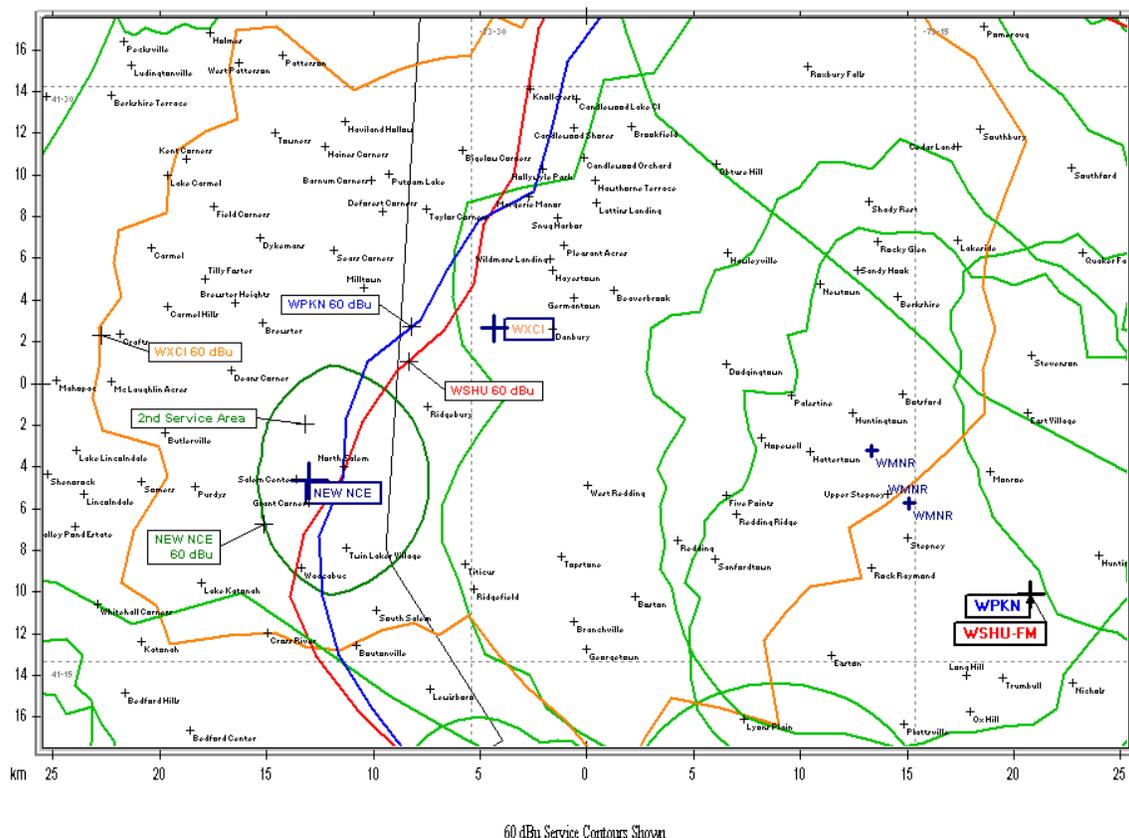

The area to which the proposed new facility provides second service is the area within the proposed new facility service contour less the area within the overlap area from either the WPKN or WSHU-FM service contour, or both.

The second service area encompasses 3,410 persons within 32.3 sq km., or 50.4% of the people residing within the proposed 60 dBu service contour.

The RadioSoft ComStudy program was employed to determine the pertinent areas and population counts.
