Interference Area
Mexia, TX

The Proposed translator will broadcast on 221, which is inside the 60 dBμ contour of second adjacent stations KZPS on channel 223, Fac ID 6378 and KKXT on channel 219, Fac ID 55768. KZPS's interfering contour at the translator site is 71.8 dBμ F(50,50). KKXT's interfering contour at the translator site is 66.8 dBμ F(50,50). Using the ratio of 100:1 (translator to KZPS, KKXT) on the second adjacent channel, the population within the proposed translator 106.8 dBμ contour is 0 (zero). Applying the antenna manufacturer's vertical radiation pattern the area of interference is able to be more accurately calculated geometrically than just by using the free space equation alone. This particular antenna is a four bay Shively 6812b. It was determined from the manufacturer's vertical plan that at 50 degrees below horizontal the interference area would extend 19.2 meters toward the ground and extend 16.1 meters horizontally. We have proposed the antenna radiation center will be 21 meters above ground with an Effective Radiated Power of 20 watts, thus the interference area will never reach the ground. There are no occupied structures or elevated roadways within the interference area of the translator.

Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
