John Trent

Re: KAJT

Dear John,

KAJT-FM operates on 88.7 Mhz with a peak ERP of 31 kW with a fence around the perimeter of the tower/building site. Station is 77.6% below the recommended limit for KAJT-FM AT 88.7 mhz for general population/controlled exposure areas. Access to the site and exposure is restricted by means of the locked perimeter fence around the facility. Site's location is in a rural area off a main Hwy. All work on tower or at the facility is coordinated with the site owner and procedures are in place to reduce power or cease operations whenever access to the tower and/or site is required.

Sincerely,

Tony L. Evans
