Re: WLFS Directional Antenna Installation

To Whom It May Concern:

Radio Training Network Inc. was responsible for the supervision of the assembly and installation of the WLFS directional antenna system. The Shively Labs 6810-6-DA antenna was installed on the tower in accordance with the manufacture's instructions on January 28, 2009.

I, Ted A McCall, personally oversaw the on site installation of the antenna system which included mounting the radiating element oriented toward 125 deg true, mounting parasitic element as per instructions and installation of feed line.

I have worked as a broadcast technician since 1977. During these years I have maintained, repaired, and installed many FM broadcast antenna systems, both directional and non-directional. I have held an FCC First Class or General Class Radiotelephone License since 1976.

I certify that the WLFS directional antenna has been installed as indicated above.

Ted A McCall  
  
Engineering Director  
Radio Training Network Inc.
