

**EXHIBIT 35 Environmental**

KXNT-FM FAC ID 12560

FCC 301 Application

Section III-B(17)

July 9, 2013

CBS Radio Stations Inc.

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The proposed transmitting antenna, an ERI model SHPX-8C6 8 bay, 1 wavelength spacing between elements, will be mounted on a tower that has been registered (#1264840) with the Commission. The center of radiation is 79.86 meters above ground. The proposed ERP is 26.9 kW H&V.

The proposed transmitting facilities will comply with the FCC guidelines that limit human exposure to radio frequency energy. The maximum power density level at any location at ground level, calculated in accordance with OET Bulletin No. 65 (August 1997), would be 8.2 % of the most restrictive applicable limit for exposures of unlimited duration. This location is 80.4 meters from the base of the tower.

This site is co-located within close proximity of the AM antenna array for KXST. If work is done on the tower in an area where over exposure could occur, the Licensee in coordination with the other users will take necessary action to prevent the overexposure of workers on the tower including reducing the transmitting power or ceasing operation completely.
