

EXHIBIT 11
ENGINEERING STATEMENT
MEREDITH CORPORATION
MODIFICATION OF BLTT19830315IW
TELEVISION TRANSLATOR STATION K53AE FOR PAHRUMP, NEVADA
PROPOSED CH 50, 1.0KW-D, 1099 MTR. HAAT

This statement supports an application by Meredith Corporation licensee of K53AE a television translator station licensed to serve Pahrump, Nevada.

The applicant is proposing to “flash-cut” the operation of K53AE from analog to digital. Additionally, K53AE is currently an analog facility operating on channel 53, a channel designated as “out-of-core.” Concurrent with this application the applicant is seeking a displacement channel to move digital transmissions “in-core” to channel 50 simultaneous with the “flash-cut.” At “flash-cut” channel 53 operations will cease and the channel will be surrendered.

No change in location is being proposed and the digital contour of the proposed operation well encompasses that of the K53AE analog contour on channel 53.

An analysis was performed using the methodology stated in OET-69 using same software (tv_process_dlptv_pt) utilized by the Commission for analyzing interference into current users and pending applicants and, therefore, should yield similar results.

The results of that analysis indicate the proposed facility is in compliance with 47 C.F.R. Sections 74.709, 74.793(e), 74.793(f), 74.793(g), 74.793(h), 74.794(b) and 73.1030.
