## ENGINEERING STATEMENT

In support of an

**Application for Construction Permit**

**For Digital Channel 26**

**KVTH Hot Springs, AR**

**66.4 kW ERP      258 m HAAT**

### PURPOSE

MARSAND, INC. has been retained by Agape Church, Inc., the licensee of KVTH analog Channel 26 of Hot Springs, AR, to prepare this engineering statement in support of an Application for Construction Permit (CP) for post-transition digital service on KVTH-DT Channel 26. There is a CP for the paired transitional digital Channel 14 (BPCDT-19990924AAP), but a form 382 was filed electing to "flash cut" on the existing, licensed analog Channel 26 (BFRECT-20050208AEF). Subsequently, the Federal Communications Commission (the "Commission") established Channel 26 for KVTH's post-transition operation in its release of the Seventh Report and Order in MB Docket No. 87-258 Appendix B ("Appendix B"). In this application, KVTH-DT seeks authorization for post-transitional digital operation on its Channel 26 at 66.4 kW Effective Radiated Power (ERP) and 258 m Height Above Average Terrain (HAAT) utilizing the existing, analog directional antenna.

### DISCUSSION

KVTH-DT proposes to use the existing, licensed analog Channel 26 antenna and install a new digital transmitter and new RF filter for digital service. Since the predicted 41 dBu F(50,90) contour of the proposed digital facilities would fall outside of the predicted DTV F(50,90) service grade contour (see Figure 1) of the allotted digital facility specified in Appendix B, KVTH-DT requests a waiver of the DTV Filing Freeze as permitted in Paragraph 151 of the Third Periodic Review Report and Order. The predicted contour of the proposed

# MARSAND, INC.

Matthew A. Sanderford, Jr., P.E.

digital facility does not extend more than 5 miles in any azimuth more than the predicted contour of the allotted facility in Appendix B (See **Table 1**). Furthermore, an interference study using the TV Process by Techware (a software program which is familiar to the Commission that is written in Fortran and run on a Sun Microsystems workstation and employs the methods outlined in the OET 69 Bulletin), confirms that the proposed facility would not exceed 0.5% new interference to any other station listed in Appendix B. A summary of the interference study is listed in **Table 2**.

The predicted F(50,90) 48 dBu contour would encompass the principal community, Hot Springs, AR, entirely as shown in **Figure 1**. A population study under the 41 dBu contour predicts service to 254,316 people or 100% of the population specified in the new DTV Table Appendix B.

There is no additional predicted interference to others based on the DTV Table Appendix B. The proposal is clear of any FCC monitoring stations, quiet zones, and Table Mountain. It is also further than 3.2 km from the nearest AM station.

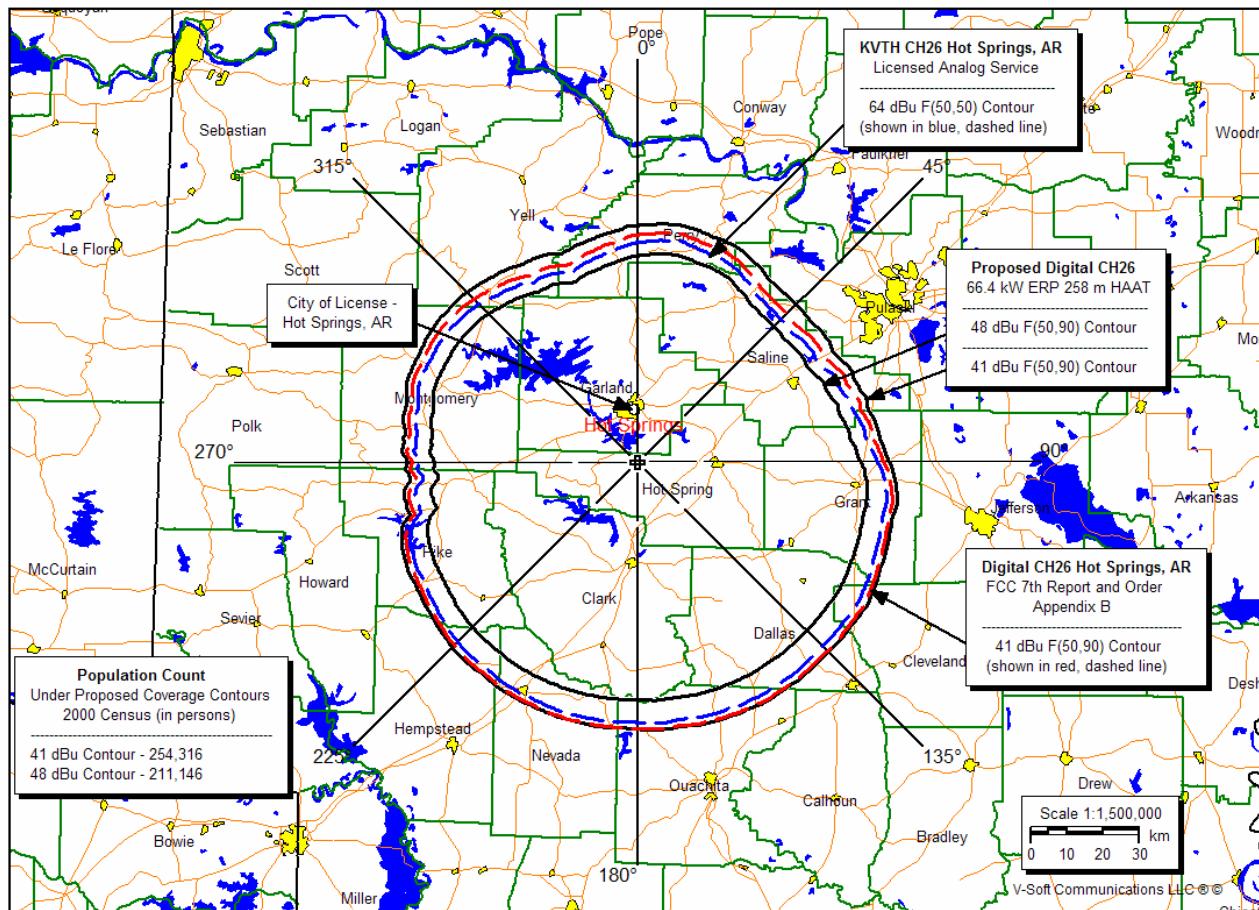

## CONCLUSION

It is respectfully requested that the Commission grant this request for CP for the proposed transmission facility as indicated in the accompanying TECH BOX.

## DECLARATION

Matthew A. Sanderford, Jr., P.E., declares and states that he is a graduate Electrical Engineer with a Bachelor of Science Degree in Electrical Engineering from the University of Texas at El Paso, a Licensed Professional Engineer in the State of Texas, and his qualifications are known to the Federal Communications Commission, and that he is President of MARSAND, INC., a Registered Professional Engineering firm in the State of Texas, and that firm has been retained by Agape Church, Inc., to perform the engineering support as contained in this report.

All facts contained herein are true of his own knowledge except where stated to be on information or belief provided by Agape Church, Inc., and as to those facts, he believes them to be true.

---

I declare under penalty of perjury that the foregoing is true and correct.

Average HAAT for radials shown: 259.9 m

kvth-dt - 41dbu contour - appendix b.txt

Call Letters: KVTH-DT (App B)

File Number:

Latitude: 34-22-21 N

Longitude: 093-02-47 W

ERP: 66.40 kW

Channel: 26

Frequency: 545.0 MHz

AMSL Height: 417.0 m

Elevation: 273.91 m

HAAT: 258.0 m

Horiz. Antenna Pattern: Directional

Vert. Elevation Pattern: Yes

Electrical Beam Tilt: 0.0

Type of contour: FCC

Location Variability: 50.0 %

Time Variability: 90.0 %

# of Radials Calculated: 360 [8 Radials Used for HAAT]

Field Strength: 41.00 dBuV/m

Primary Terrain: V-Soft 3 Second US Terrain
