

## **EXHIBIT 10 B**

### **K284CL Qualification**

The proposed minor modification to K384CL demonstrates that its 60dBu service contour is completely within the 40Km radius of its primary station KBLF. The proposed antenna, orientation, and power level will remain the same as its current license. The only things that will be modified are the location of the tower, which is approximately a quarter mile from the current location and a minor change in the elevation of the center of radiation.

Therefore it is reasonable to state that this facility meets the requirements to qualify as a translator for station KBLF, Red Bluff, California.
