Re: Antenna Alignment Certification  
KJZP-FM, Prescott, AZ

To Whom It May Concern:

M Haywood Associates, Inc. performed a field survey on October 8th, 2009 on Mt. Francis near Prescott, Arizona for the installation of the Propagation Systems, Incorporated, single-element Directional Antenna for KJZP-FM, Prescott, Arizona.

The survey consisted of establishing a baseline referencing Grid North, then translating the Base line azimuth to reference True North.

From the True North reference a Brunton compass was used to verify the exact alignment of the azimuth of the antenna to be 5 Degrees from True North. Therefore, M. Haywood & Associates, Inc. certifies the KJZP-FM antenna to be correctly aligned, as specified by PSI Antennas and documentation provided by the FCC.

Sincerely,  
M HAYWOOD ASSOCIATES, INC.
