Existing tower.

WBLS is second adjacent to the proposed facility. It puts a 61.14 dBu signal into the transmit site of the proposed LPFM. The appropriate interfering contour is thus 101.14 dBu. With the proposed 4 Watts ERP, this will go 123.0 meters from the antenna (see graphic). The attached map shows the nearest house is 159.9 meters from site of the proposed transmit antenna (the nearest garage is 145 meters, and 257 meters to the bath house for the pool to the east). Thus there is no population in the area of interference and a no-population waiver for this second adjacent station is appropriate.
