

TECHNICAL STATEMENT
APPLICATION FOR LICENSE
TELEVISION STATION WTVG-DT
CHATTANOOGA, TENNESSEE

This Technical Statement was prepared on behalf of WTVG-DT, Chattanooga, Tennessee, in support of an application for license to cover its construction permit (See FCC File No. BMPCDT-20010411AAG). This Technical Statement provides additional documentation concerning the replacement of the antenna supporting structure in compliance with Section 73.1690(b)(1) of the FCC Rules.

For structural reasons, it was necessary to replace the existing uniform cross-section guyed tower supporting the WTVG-TV/DT transmitting antennas. The tower was built with identical height and geographic coordinates* as the original WTVG-TV/DT supporting structure. The new tower structure was registered with the FCC and bears FCC antenna structure registration no. (ASRN) 1235360. The old tower bearing FCC ASRN 1048817 has been dismantled.

The WTVG-DT license should reflect this revision of the antenna supporting structure ASRN. The WTVG-DT facility was built in accordance with its construction permit in all other respects.

Louis Robert du Treil, Jr.
