Interference Analysis DISPLACEMENT APPLICATION

WKOB-LP
FCC File No. BLTTTL-20020802AAP
Facility ID. No. 51441

WKOB-LP is licensed to Channel 53. As the facility is licensed to an out-of-core channel, applicant seeks displacement relief for the purposes of relocating WKOB-LP's broadcast operations to an in-core channel. In addition, the channel to which WKOB-LP is licensed is presently occupied by another facility, and, as such, WKOB is currently dark. Accordingly, applicant requests expeditious processing of this application so as to allow WKOB-LP to resume service.

The proposed operational parameters for WKOB-LP are as follows:

Channel	42
Frequency Offset:	ZERO OFFSET
Antenna radiation center height above ground level:	157 meters
Maximum effective radiated power:	10 KW
Antenna type and model #:	MCI 955412
Antenna Orientation	300 Degrees
Transmitter Site	40-42-18.9 N 74-00-45.9 W

A study has been conducted using the provisions of sections 74.703 74.705, 74.706, 74.707, and 74.709 which indicates that the proposal will not create prohibited interference with other existing NTSC full power, DTV, LPTV, Class A, and Land Mobile facilities other than the NTSC Full-Power, DTV, and LPTV facilities contained in the tables below. However, based upon the provisions of OET 69, the proposed station's operation complies with the FCC's interference criteria towards the aforementioned stations. Below is a complete analysis and tabulation of the predicted interference that would be caused by this proposal pursuant to the provisions of OET 69. This analysis indicates that no prohibited interference will be caused by the operation of the proposed facility. Accordingly, applicant requests a waiver of Section 74.705, Section 74.706, and Section 74.707 based upon the results of the OET 69 analysis with regard to the aforementioned NTSC Full Power, DTV, and LPTV stations.

Full Service NTSC Facilities

An interference analysis was conducted using 74.705 criteria and OET 69 Bulletin standards with regard to the effect of the proposed station on the NTSC full power stations listed below. Below is a tabulation of the results from the Bulletin OET 69 study.
