

Exhibit 15 - Statement C
NIGHTTIME INTERFERENCE ANALYSIS
prepared for
Corpus Christi Broadcasting Co., Inc.
KSIX Corpus Christi, Texas
Facility ID 13964
1230 kHz 1.0 kW ND-1 U

With respect to the nighttime operation of KSIX, no material change in skywave interference results from the proposed change in coordinates. Since KSIX is a Class C AM station operating on a local channel and the coordinate correction involves a distance of 0.3 km, no significant impact is expected with respect to nighttime allocations. Further, this will not materially affect the KSIX nighttime interference-free coverage. As shown in **Exhibit 10 - Statement A**, the coordinate correction is a result of the licensee's compliance with the Commission's Antenna Structure Registration program and no physical changes are proposed herein.
