RE: Radio Tower Alignment - WLFX - Richmond, Kentucky

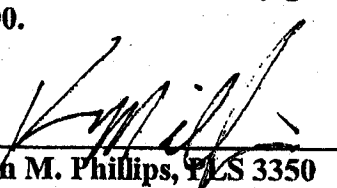

I, Kevin M. Phillips, a Licensed Professional Land Surveyor in the State of Kentucky, do hereby certify that I have set reference points on a 262 degree azimuth based on True North from the WLFX radio tower which is located approximately 5.3 miles east of US 421 along KY 499 on Walter Lakes Road as shown on the attached map.

The True North azimuth reference was established on-site with a GPS receiver occupation of two points. Two Trimble 4000 SSE receivers were used in the GPS survey.

I further certify that I witnessed the initial alignment of the actual antenna as it was being mounted on the tower and that it was in alignment with the aforementioned 262 degree azimuth line (from True North).

This certification is based on my ground survey completed on October 28, 2000.
