Prepared for Radio International KATQ Broadcast Association, Inc.

The KATQ radiator is a series-fed, guyed tower of 113.6° electrical length and overall height AGL of 90.8 meters. A Bext TFC2K-4, FM antenna is mounted at the 80-meter level. It is fed with LCF78-50JA coaxial cable attached to one leg of the tower and electrically bonded to it at approximate 15-meter intervals.

The lower end of this coax is isolated from ground using a Kintronic ISO-100-FM coaxial isolation inductor. The isolation inductor is resonated with a parallel vacuum capacitor and presents a very high impedance across the base of the tower.
