

REQUEST FOR WAIVER OF 73.525
Section VII, Question 15(e), Exhibit 19

Applicant respectfully and specifically requests a waiver for this application regarding protection to TV channel 6 as required by Section 73.525 of the Commission's rules.

Applicant submits that with the pending termination of analog broadcasting on TV channel 6 scheduled for February 17, 2009, there will be no impact to Full Power TV channel 6 by this proposed operation.

Furthermore, in allowing for the normal processing period elapsing towards February 17, 2009 for applications, the grant of a construction permit hereunder, will still allow the Applicant sufficient time within the three year period for construction of this station.

The Applicant pledges that, while it may perform the actual build-out upon grant of a Construction Permit, it will not begin radiating a signal, other than for short periods to verify installation, until after the February 17, 2009 date.

Regarding Low Power TV6 stations, as there is no firm date for the migration of those stations, Applicant will use Vertical only polarization in this application to reduce any interference to those affected areas/populations. Applicant agrees to fully cooperate with the affected TV6 station regarding any legitimate interference complaints and will provide any necessary filters. The Applicant is confident that the Commission will address the issue of analog Low Power TV6 stations shortly and thus will still allow the Applicant to construct the new NCE in a timely manner within the 3 year Construction Permit period.

The Applicant submits that this waiver request is in the public interest.
