COMPREHENSIVE TECHNICAL EXHIBIT

Application for Construction Permit
WTKJ-LP, Facility ID 128834, Watertown, NY
FCC File Number BLTTL-20080804ADM
EICB-TV EAST, LLC

Application for Flash Cut of Licensed Facility. The within proposal requests a flash cut to digital operation of its licensed facility as follows: ERP is reduced to 1.5 kW. The service contour of the proposal contains the 74 dBu protected contour of the underlying license; the same community is served and the transmitter location is unchanged.

Interference Analysis. An OET 69 Longley-Rice study exhibit for the above-captioned application was performed using the Techware, Inc. FCC interference analysis program on a Sun Blade computer. The study demonstrated the proposal's compliance with all applicable portions of §74.793.

Canadian Border Area Application. The location of the transmitter site is within the Canadian border area coordination distance and the 19 dBu F50, 10 contour crosses the border. However, this facility has previously been coordinated on this channel with the government of Canada and, inasmuch as the 19 dBu contour of this proposal is contained entirely within the previously coordinated contour area, this application should not require resubmission to Canada.
