

## **EXHIBIT 12**

### **Page #1, Waiver Request of Section 74.1204**

Grass Valley, CA New-T 5 Watts ERP

Calvary Chapel of Twin Falls, Inc. 7/03

The proposed site is contained entirely inside the service contour of second-adjacent station KCCL, Shingle Springs CA

### **KCCL**

The proposed site is contained entirely inside the service contour of second-adjacent Station KCCL, Channel 270, Class B, 47 kW, Shingle Springs, CA. As shown by the map on **page #2** of this waiver request, the level of the second-adjacent application KCCL arriving protected F(50,50) signal at the proposed transmitter site is 62-dBu. Using the Undesired-to-Desired method for calculating proposed interference (the basis of the FCC current contour overlap regulations and an acceptable method for the purposes of determining lack of interference for an FM Translator), the proposed interfering contour with respect to KCCL is 96-dBu (free-space contour method employed). This means that the 96-dBu interfering signal would, in the worst case at the maximum radial, extend 253 meters, or .253 km from the base of the tower. A .253 km interference contour has been drawn around the tower site on the 7.5 Min Topo Map, which has been submitted for verification of no population. Since no population inhabits this 96-dBu interfering area, Calvary Chapel of Twin Falls, Inc. respectfully requests a waiver of the FM translator contour overlap regulations with respect to second-adjacent channel stations KCCL.
