September 7, 2005

In evaluating the proposed displacement application for K68DL FID 66997 an outgoing interference study was executed at the existing tower location using the proposed parameters as outlined in the application. The stations listed in the table below showed possible interference. When these stations were evaluated for outgoing interference using the OET-69 Longley Rice methodology, the interference, when rounded to the nearest whole percent, was found to be zero percent interference in each case.
