

**MINOR CHANGE APPLICATION
WLIR-FM
JARAD BROADCASTING COMPANY OF HAMPTON BAYS LLC.
HAMPTON BAYS, NY
CHANNEL 296 A 107.1 MHZ
4100 WATTS AT 121 METERS HAAT**

This technical statement and attached exhibits were prepared on behalf of Jarad Broadcasting Company of Hampton Bays LLC., licensee of FM station WLIR, channel 296 Hampton Bays, New York. WLIR herein proposes to increase the center of radiation above ground level and above mean seal level, increase the height above average terrain and decrease the effective radiated power and change transmitter locations. As such, WLIR will remain an equivalent class A facility.

Since Jarad Broadcasting Company of Hampton Bays LLC., is proposing to install the new WLIR antenna on an existing tower at its existing site, the Federal Aviation Administration has not been apprised of this proposal. The existing tower is registered with the Commission, antenna structure number 1007270.

The proposed WLIR transmission site will meet the requirements of section 73.207 to all stations with the exception of WCCC-FM channel 259B in Hartford CT, and WXPB FM channel 296A in Briarcliff Manor, NY. Section 73.215 minimum spacing requirements are met to these stations and 73.215 processing is requested.

The proposed service contours have been calculated in accordance with the Rules, and the data obtained has been tabulated and plotted in this report.

The proposed facility will not result in human exposure to radio frequency radiation in excess of the applicable safety standards specified in the Commission's rules. The facility will be properly marked with signs, and entry is restricted by means of fencing with locked doors and gates.
