Subject: Correction to pending STA request

Dear Mohammad,

Pending before you is STA # ;BSTA-20090316AAE. (formerly 20090319AEV). We would like to request that you correct that STA request to show question 7, Overall tower height above ground level to be 182.8 meters and to show the antenna registration number to be 1022324.

We received your message that this proposal is predicted to cause interference to : WPCW BLCT-20030512ABA Channel 19 Jeannette, PA. We have retained the service of Dr. B W St. Clair to evaluate this interference problem and expect his response with any changes needed to clear this interference in a few days. Please hold the STA until we receive Dr. St. Clair's recommendation.

In addition, please be advised that Channel 19 is supposed to go off the air very shortly, since it is analog and is being replaced by digital channel 11.

We also received your message that this proposal needs to go to Canada for coordination. I do not understand why a 15kW digital Station operating from the same tower that full power channel 16 analog formerly operated from, at close to 1mega watt, since channel 16 full power analog was already coordinated and our request is temporary in nature. Based on the already granted full power channel 16 analog Canadian Coordination, can't you grant this much smaller, co-located digital facility?

Thank you for your continuing assistance in these matters.

Ben Perez for Bruno Goodworth Network Inc.
