

## REVISED COVERAGE AND POPULATION COUNTS

The FCC selected KSJA as the best applicant based in part on its superior technical application.

The original KSJA application proposed that its 60 dBu contour would encompass 1651 square kilometers and new population to be served was 69,678.

The **revised** KSJA application proposes that its 60 dBu contour will encompass **1,058** square kilometers with a new population of **48,060**.

The next best application, Powerhouse, proposed that its 60 dBu contour would encompass 535 square kilometers with a population of 3,064.

The instant KSJA application still proposes to encompass more than 98% more area than Powerhouse, and to serve 1569% more population.

### Conclusion:

The revised Population and Coverage areas will still be well above 25% more than the next best application. Thus, the instant request for modification of the KSJA CP continues to meet this condition of the original grant.
