Mohammad:

Since there is already a full-service analog facility on channel 13 registered with Mexico at this location, IB would have no objection to the authorization of this digital LPTV without the need for Mexico coordination.

Sincerely,  
James

James,

The subject LD application proposes a channel that a full service TV station is vacating (same transmitter site), but at a much lower ERP (30 dB less) than the current analog operation. However, it is in the border area with Mexico. Does it still require coordination or is that fact that the ERP is significantly lower remove this need? The client would obviously like to avoid years of delay due to Mexican interaction.

Regards,  
Jon
