

## **DETERMINATION OF POPULATION AND LAND AREA CALCULATIONS**

All area and population data has been calculated using 2000 U.S. Census data as imported into the V-Soft, Inc. software used for these studies. Population for the exhibits in this application was calculated using the 2000 U.S. Census block level SF1 population database. The centroid method was used with 360 radials and the area calculated using numeric integration from these radials. Water area outside the County boundary is excluded from area computations.
