SUMMARY OF APPLICATION AND ENGINEERING STATEMENT:

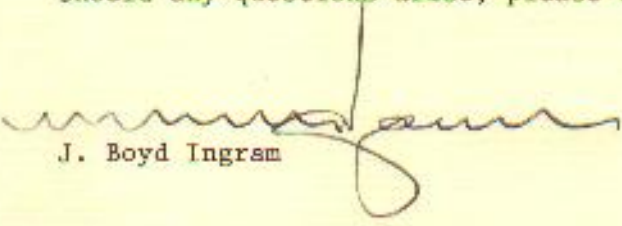

This application proposes a change to non directional operation at the current transmitter site of KVRE (FM), with antenna HAAT and erp remaining unchanged.

This is made possible by the reallocation of KASR from Conway, Arkansas to Vilonia, Arkansas, as approved in Docket MB 03-23, RM-10633. This removed any shortspacing to KVRE (FM), and will permit non directional operation once the new facility is constructed in Vilonia.

The current site will not interfere with the Vilonia operation, and this application is conditioned by the construction of the new Vilonia facility, and operation with non directional antenna cannot commence until this has been placed in operation.

This application and all exhibits were prepared by J. Boyd Ingram, who has practiced before the Federal Communications Commission since 1958, and whose qualifications are well established.

Should any questions arise, please contact us at the above address.
