**TECHNICAL STATEMENT**

This Technical Statement and attached exhibits were prepared on behalf of F.T.G. Broadcasting, Inc. ("FTG"), permittee of station WYKY, Channel 291A, Science Hill, Kentucky. FTG proposes to modify its outstanding permit for WYKY (BNPH-20070502ACA) to an alternate site with an increase in height above average terrain and a decrease in effective radiated power.<sup>1</sup> Further, WYKY at new location meets the Commission's minimum distance separation requirements, therefore, FTG proposes to delete §73.215 contour protection.

FTG proposes to construct a new tower to support the WYKY antenna system. However, as the tower is less than 200 feet, the Federal Aviation Administration was not apprised of this proposal. Further, based on a review using the Commission's TOWAIR program, no tower registration is necessary. All other necessary documentation used to certify the technical portion of FCC Form 301 has been forwarded to FTG and is available to the Commission upon request.<sup>2</sup>

- 
- 1) WYKY will be an equivalent maximum Class A facility.
  - 2) For the purposes of environmental analysis, only the radio frequency radiation evaluation was undertaken by Graham Brock, Inc. The applicant will conduct the balance of the environmental reviews (i.e., location of site near areas of historic importance, Indian or tribal areas, etc.), as necessary. When completed, FTG will notify the Commission through an amendment to this instant application.
