

### **Justification for Silent STA**

High Desert Broadcasting LLC (“High Desert”) constructed FM Translator Station K259BD, Rosamond, California consistent with its underlying construction permit and filed a license to cover the construction in FCC File No: BLFT-20070817ACO.

From the start of operation, K259BD experienced frequency inter-modulation problems that High Desert was unable to fix given the FM Translator’s licensed operating parameters. For this reason, K259BD was shut down on August 27, 2007 after ten days of operation. High Desert subsequently filed an application to modify the FM Translator’s license in order to resolve the FM Translator’s inter-modulation problems, which modifications the FCC has granted in File No: BPFT-20070830ADW. High Desert has ordered the equipment necessary to implement the modifications, but all of the equipment has not yet been delivered. As soon as High Desert is able to implement the modifications, K259BD will resume operations. Until that time, High Desert requests STA for K259BD to remain silent.
