On September 27, 2012, Mr. Tony Evans informed us that upon further review, the KTRG antenna installation was completed on the tower structure at the coordinates identified in ASR No. 1059373 and the KTRG Construction Permit, as modified, issued by the FCC.

On September 5, 2012, Mr. Tony Evans notified us that the antenna installation had been completed and that the antenna's true orientation of 225° had to be verified. My Head-of-Field Operations (Mr. Mike Hurst) met with Mr. Tony Evans on September 6, 2012 to begin setting up control monuments. I personally visited the site on the evening of September 6, 2012. My personal were on-site on September 7, 2012 to help set and check final adjustments. I can certify that the antenna is oriented at a true azimuth of 225°.

BASIS OF BEARINGS: Bearings are based on Geodetic North as measured using GPS (Global Positioning System) on September 6, 2012, operating within the parameters of WGS-84.

Respectfully Yours

Kenneth D. Lynch - President
