

Environmental Considerations

An Environmental Assessment is not required, as grant of this application would not be considered a major environmental action.

The proposed transmitting antenna will be side-mounted on an existing pole atop a building, with no increase in the overall structure height. Therefore, no FAA filing is required.

The proposed transmitting facilities would comply with the FCC guidelines limiting public exposure to radio frequency energy. The maximum power density level at ground level for the proposed facilities, calculated in accordance with OET Bulletin No. 65 (August 1997), is 0.63% of the public limit; therefore, the station is categorically excluded under FCC Rules from having to consider the effects of other stations at the site.
