

Engineering Declaration

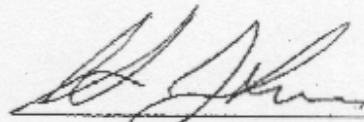

This is to certify that I, Stan Siems, have examined the engineering documentation, antenna manufacturer's documentation, surveyor's affidavit and actual installation of the directional antenna for FM radio station KTDV, State Center Iowa, permittee Marshalltown Education Plus, Inc. under file number BMPED-20080328AGP and find that all information is true and correct.

The KTDV directional antenna on the tower in Union, Iowa was installed according to the manufacturer's instructions and the FCC Construction Permit. The antenna was aligned with the assistance of a surveyor.

My qualifications include 30 plus years of experience, not only in broadcast, but in general communications, to include preparation of application engineering data, licensing requirements, and hands on installations. I have worked with directional antenna systems before and am familiar with Section 73.316 of the Commission's Rules. I spent 3 years in the military as an Armed Forces Radio and TV Broadcast Engineer. I am also a licensed amateur radio operator and completed electronic communications training at DeVry Technical Institute. I have submitted documentation to the Commission previously for other clients which has been accepted.
