

Exhibit E-9

The construction permit as issued by the Commission listed two special conditions or restrictions. The applicant is in compliance with both of these conditions.

The first of these special conditions pertains to coordination with other users of the site to protect workers from being exposed to harmful levels of radiofrequency radiation. The applicant certifies that it will coordinate with other users of the site to protect workers and other personnel from exposure to levels of radiofrequency radiation which may be in excess of the applicable safety standards. Such coordination includes, but is not limited to a reduction in power or cessation of operation.

The second special condition or restriction pertains to the type of antenna utilized at the site. Under that condition, the applicant was required to utilize a 10-bay rototiller style antenna in order to maintain the provisions of automatic program test authority. The applicant certifies that the specified type of antenna was utilized at the site, and that the provisions of automatic program test authority under which KCVN-FM is currently operating are applicable.
