

**RF Exposure Statement**  
**WIWB Suring, WI**

The facility proposed in this application is for post DTV transition operation and will replace the current digital facilities. The current digital operation on channel 21 has an ERP of 450 kW. The new DTV facility will also operate on channel 21 at the same elevation as the current DTV facility but with an ERP of 874 kW. In that the center of radiation is 312 m above ground level and that the antenna has very little radiation in the downward direction this increase in power will not cause any significant increase in radiation to those on the ground in the vicinity of the tower and all levels will continue to be within acceptable limits. All other current safeguards related to the site with regard to both workers and the general public will remain in place.
