

On May 1, 2012, I made measurements around the K294BY (formerly K268BH) site with a ETS LINDGREN HOLADAY Model: HI-2200 Serial: 00045654 RF meter. I found most of the site readings to be between 20uW and 40 uW per square cm. There was one place I measured 141uW at the side of the barn where the signals reflected together. At all locations at ground level, the site complies with the Uncontrolled Standard. An RFR warning sign has been installed at the base of the tower to prevent anyone from climbing the tower without notification that RFR levels on the tower exceed exposuare limits.
