

TECHNICAL STATEMENT
K284CI DENVER, COLORADO, CH 284D
4-K's, LLLP
FCC FORM 349
JANUARY 2019

This Technical Statement is made in support of a minor change application for FM translator station, K284CI licensed to Denver, Colorado, facility ID 33475.

K284CI seeks to remain a fill-in translator for KDCO(AM) Denver, Colorado, facility ID 34585. K284CI will remain at its current tower site with the same antenna, Scala CA-2/CP at the same height. K284CI seeks to increase its Effective Radiated Power from 140 watts (0.14KW) to 250(0.25KW) watts and rotate the directional pattern by 91 degrees (179° to 90°). The following will show that the new proposed operation of K284CI will meet all of the Commissions technical requirements for an FM translator station.

The new proposed operation of K284CI specifies a maximum Effective Radiated Power of 250 watts. It will operate with a directional antenna using a Scala CA-2CP, dual polarized, composite directional. The antenna is mounted on an existing tower with an overall height of 18 meters above the ground. The antenna is mounted with a Center of Radiation of 14 meters above the ground, and 2259 meters Above Mean Sea Level. The coordinates of this tower are located at N 39° 43' 45", W 105° 14' 08" (NAD 27).

Figure 1 is a detailed interference study conducted on channel 284D with these new proposed facilities. It shows that the new operation of K284CI will not cause any interference to any existing or proposed FM stations, LPFM or other FM translators on any of the pertinent same channel or adjacent channels to channel 284, with the exception

of KXKL-FM Denver, CO, facility ID 59959, on channel 286C, and KKFN(FM) Longmont, Colorado operating on channel 282C1, facility ID 71767. The proposed operation of K284CI on 284D is located within the protected 60 dB μ contour of 2nd adjacent channel stations of KXKL-FM and KKFN(FM).

Figure 2 shows the predicted F(50-50) field strength of KXKL-FM(FM) at the proposed K284CI transmitter site is 104.3 dB μ . Therefore, the respective predicted interfering contour F(50-10) generated by the proposed K284CI on channel 284D is an additional 40 dB μ or 144.3 dB μ .

Figure 3 show the predicted F(50-50) field strength of KKFN(FM) at the proposed K284CI transmitter site is 86.0 dB μ . Therefore, the respective predicted interfering contour F(50-10) generated by the proposed K284CI on channel 284D is an additional 40 dB μ or 126.0 dB μ .

Figure 4 shows the coverage area for the worse case 126.0 dB μ interference contour F(50-10) and shows that there is no population in the area of interference.

Figure 5 is a more detailed interference study conducted in regards to KKFN(FM). It shows the vertical antenna pattern of the Scala CA-2-CP antenna and that the predicted 126.0 dB μ contour will not reach the ground at any point. Thus, there will be no real life interference caused to KKFN.

The applicant, 4-K's, LLLP, respectfully requests a waiver of C.F.R. 74.1204(d) of the Commission's rules based on the fact that there is no population within the area of predicted interference. There are no homes nearby the proposed existing tower site, which is a privately owned 3/4 acre square wooded area, with private access. The transmitter building is uninhabited and does not have indoor plumbing. Should any

unforeseen actual interference be caused, the licensee will immediately reduce power or even cease broadcasting with K284CI until such interference can be eliminated.

Figure 6 is the directional antenna data for the proposed Scala CA-2/CP composite directional antenna system.

Figure 7 shows the proposed 60 db μ of K284CI will be completely contained inside of the current 2mv/m daytime predicted coverage contour of the station being rebroadcast, KDCO(AM) Denver, Colorado on 1340 KHz. The proposed operation of K284CI will be considered a “fill-in” translator for KDCO(AM) Denver, Colorado, facility 34585, thus some of the maximum allowable ERP limits on some of the pertinent radials will be exceeded. However, the maximum ERP on any radial will not exceed 250 watts, thus this proposal is compliance with MERP’s rules, or with 74.1235(a).

Since no change in transmitter site is being proposed, it can be assumed that the current operation of K284CI and the new proposed operation will overlap as required.

It was found that the new proposed operation of K284CI Denver, Colorado on channel 284D, will satisfy all of the required commission rules and regulations for an FM translator station.
