

TECHNICAL STATEMENT
RADIO MULTIPLE OWNERSHIP ANALYSIS
CITICASTERS LICENSES, INC.

This statement and the attached figures were prepared on behalf of Citicasters Licenses, Inc. (“Citicasters”). A multiple ownership analysis was prepared considering the following radio stations under present or proposed common ownership and/or time brokerage:

Call Sign	City of License	Facilities
NEW(FM)	Twin Falls, ID	Channel 252C1, 100 kW, 299 m
KLIX(AM)	Twin Falls, ID	1310 kHz, 5 kW, U, DAN
KEZJ-FM	Twin Falls, ID	Channel 239C1, 50 kW, 189 m
KLIX-FM	Twin Falls, ID	Channel 243C1, 100 kW, 40 m

Since these stations have overlapping principal community contours (5 mV/m for AM stations, 3.16 mV/m for FM stations), an ownership study has been prepared in accordance with the Federal Communications Commission multiple ownership rules.¹

There are no other principal community coverage contours controlled or proposed to be controlled by Citicasters or its affiliates that overlap or intersect the principal community coverage contour of NEW(FM).

Radio Markets

The “radio market” applicable to common ownership or time brokerage of the subject stations is defined as the area encompassed by the mutually overlapping principal community contours of the commonly owned stations. The predicted principal contours of KLIX(AM), KEZJ-FM, KLIX-FM and NEW(FM) are shown in Figure 1 herein. There is one “radio market” for analysis under the Commission’s Rules.

Market 1 is defined by the principal community contours of KLIX(AM), KEZJ-FM, KLIX-FM and NEW(FM).

Count of Stations in Defined Markets

The number of radio stations in the “radio market” is determined by counting the operating, commercial stations having principal community contours which overlap or intersect the principal community contours which define the radio market, plus the subject co-owned stations.

In Market 1, there are 18 radio stations (8 AM and 10 FM), including the subject co-owned stations, that intersect or overlap the “radio market.”

¹ See Section 73.3555 of the FCC Rules.

Figure 2 is the tabulation of the other radio stations identified in each of the defined radio market. Only known licensed, operation commercial stations were employed for the study. Distances to contours for AM stations were predicted using the antenna patterns as identified in the Commission's AM database and the appropriate Ground Wave Field Strength versus Distance Graph of 47 CFR 73.184. Ground conductivities were obtained from FCC Figure M3. Distances to the FM contours were determined based on the method of 47 CFR 73.313. Terrain data was derived from the N.G.D.C. 30-second computer database for each of the FM stations using radials spaced ever 10 degrees of azimuth.

Based on the above, it is concluded that the proposed common ownership and/or time brokerage complies with Section 73.3555(a) of the FCC Rules.

A handwritten signature in black ink, appearing to read "R M Gates Jr", with a stylized flourish at the end.
